A, Molecule type: DNA
A, Residues: 1-440 <SUT>
A, Cross-references: EMBL:X56336; NID:g20334; PIDN:CAA39776.1; PID:g20335
A; Cross-references: EMBL:X56336; NID:g20334; PIDN:CAA39776.1; PID:g20335
C; Function:
A; Introns: 33/3; 78/1; 346/3
C; Function: catalyzes the hydrolysis of internal 1,4-alpha-D-glucosidic bonds
A; pescription: catalyzes the hydrolysis of internal 1,4-alpha-D-glucosidic bonds
C; Superfamily: wheat alpha-amylase; alpha-amylase core homology
C; Keywords: glycosidase; hydrolase; polysaccharide degradation
F; 174-318/Domain: alpha-amylase core homology <AMY>
F; 207, 232, 315/Active site: Asp, Glu, Asp #status predicted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           fructose-permease IIBC component fruA homolog - Mycoplasma genitalium

DEVELOPMENTAL STAGE: EXPRESSED AT A HIGH LEVEL DURING GERMINATION
IN THE ALEURONES CELLS UNDER THE CONTROL OF THE PLANT HORMONE
IN THE ALEURONES CELLS UNDER THE CONTROL OF THE PLANT HORMONE
GIBBERELLIC ACID AND IN THE DEVELOPING GRAINS AT A LOW LEVEL.
SIMILARITY: BELONGS TO FAMILY 13 OF GLYCOSYL HYDROLASES, ALSO
KNOWN AS THE ALPHA-AMYLASE FAMILY.
CAUTION: ALL THE CATALYTIC RESIDUES ARE HIDDEN BY WHAT SEEMS TO BE
FRAMESHIFT ERRORS FROM THE ORIGINAL NUCLEOTIDE REFERENCE.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Biol. Chem. 258:8169-8174(1983).

CATALYTIC ACTIVITY: Endohydrolysis of 1.4-alpha-glucosidic caralytic activity: Endohydrolysis of 1.4-alpha-glucosidic linkages in oligosaccharides and polysaccharides.

COPACTOR: BINDS A CALCIUM ION REQUIRED FOR ITS ACTIVITY.

SUBCELLULAR LOCATION: Extracellular:

SUBCELLULAR LOCATION: Extracellular:

DEVELOPMENTAL STAGE: PRODUCTION OF ALPHA-ANYLASE IS HORMONALLY REGULATED. GERMINATING EMBRYOS PRODUCE THE HORMONE GIBBERELLIC ACLD, WHICH WITHIN 10 HOURS STIMULATES THE ALEURONE CELLS COVERING THE ENDOSPERM OF THE SEED TO PRODUCE ALPHA-ANYLASE. THE ENZYME THEN DEGRADES THE STARCH MITHIN THE ENDOSPERM FOR USE BY THE DEVELOPING PLANT EMBRYO.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            STWILARITY: BELONGS TO FAMILY 13 OF GLYCOSYL HYDROLASES, ALSO KNOWN AS THE ALPHA-AMYLASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             MISCELLANEOUS: THERE ARE AT LEAST 4 TYPES OF ALPHA-AMYLASE IN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             HORVU

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ACID, WHICH WITHIN 10 HOURS STIMULATES THE ALEUKUNE CELLS ACID, WHICH WITHIN 10 HOURS STIMULATES THE ALEUKUNE CELLS CONTROL OF THE SEED TO PRODUCE ALHA-ARYLASE. THE ENZYME THEN DEGRADES THE STARCH WITHIN THE ENDOSPERM FOR USE BY THE DEVELOPING PLANT EMBRYO.

MISCELLANEOUS: THERE ARE AT LEAST 4 TYPES OF ALPHA-AMYLASE IN BARLEY.

MISCELLANEOUS: TYPE B ISOZYME MRNA IS UNDETECTABLE IN UNSTIMULATED CELLS AND INCREASES A HUNDRED-FOLD AFTER STIMULATION WITH GIBBERELLIC ACID.

CELLS AND INCREASES A HUNDRED-FOLD AFTER STIMULATION WITH GIBBERELLIC ACID.

SIMILARITY: BELONGS TO FAMILY 13 OF GLYCOSYL HYDROLASES, ALSO KNOWN AS THE ALPHA-AMYLASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                nt Mol. Biol. 3:407-418(1984).

CATALYTIC ACTIVITY: Endohydrolysis of 1,4-alpha-glucosidic linkages in oligosaccharides and polysaccharides.

COFACTOR: BINDS A CALCIUM ION REQUIRED FOR ITS ACTIVITY.

DEVELOPMENTAL STACE: PRODUCTION OF ALPHA-AMYLASE IS HORMONALLY REGULATED. GERMINATING EMBRYOS PRODUCE THE HORMONE GIBBERELLIC ACID, WHICH MITHIN 10 HOURS STIMULATES THE ALEURONE GELLS COVERING THE ENDOSPERM OF THE SEED TO PRODUCE ALPHA-AMYLASE. THE ENZYME

CATALYTIC ACTIVITY: Protein N-phosphohistidine + histidine + sugar phosphate.

SUBCELLULAR LOCATION: Integral membrane protein (
SIMILARITY: Contains 1 PTS EIIA domain.

SIMILARITY: Contains 1 PTS EIIG domain.

SIMILARITY: Contains 1 PTS EIIC domain.

- COPACTON: BINDS A CALCIUM ION REQUIRED FOR ITS ACTIVITY.

- SUBUNIT: MONOME:

- DEVELOPMENTAL STAGE: EXPRESSED AT A HIGH LEVEL DURING GERMINATION IN THE ALEURONES CELLS UNDER THE CONTROL OF THE PLANT HORMONE GIBBERELLIC ACID AND IN THE DEVELOPING GRAINS AT A LOW LEVEL.

- SIMILARITY: BELONGS TO FAMILY 13 OF GLYCOSYL HYDROLASES, ALSO KNOWN AS THE ALPHA-AMYLASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             STRAIN-CV. Plant Physiol. 103:1459-1459(1993)

- CATALTTIC ACTIVITY: Endohydrolysis of 1,4-alpha-glucosidic linkages in oligosaccharides and polysaccharides.

- In CopacTors. BINDS A CALCIUM ION REQUIRED FOR ITS ACTIVITY.

- SIMILARITY: BELONGS TO FAMILY 13 OF GLYCOSYL HYDROLASES, AI KNOWN AS THE ALPHA-AMYLASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           SEQUENCE FROM N.A.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SUBUNIT: In chloroplasts, the RNA polymerase is composed or subunits: alpha, beta, beta', and beta".
SUBCELLULAR LOCATION: Chloroplast.
SIMILARITY: Belongs to the RNA polymerase beta chain family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SUBSTRATES.

-i- SUBCELLULAR LOCATION: Chloroplast.
-i- SIMILARITY: Belongs to the RNA polymerase beta chain family.

II CATALYTIC ACTIVITY: Endohydrolysis of 1,4-alpha-glucosidic linkages in oligosaccharides and polysaccharides.

II COFACTOR: BINDS A CALCIUM ION REQUIRED FOR ITS ACTIVITY.

II SUBLNIT: MODOMET:

II TISSUB SPECIFICITY: GERMINATING SEEDS.

II DEVELOPMENTAL STAGE: EXPRESSED AT A HIGH LEVEL DURING GERMINATION IN THE ALEURONES CELLS UNDER THE CONTROL OF THE PLANT HORMONE GIBBERELLIC ACID AND IN THE DEVELOPING GRAINS AT A LOW LEVEL.

SIMILARITY: BELONGS TO FAMILY 13 OF GLYCOSYL HYDROLASES, ALSO KNOWN AS THE ALPHA-AMYLASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                SEQUENCE FROM N.A.
